Rege Etzel, President and Scott Gracie, VP are proud to announce that Etzel Engineer and Build, Inc. is celebrating its 10th anniversary. The Saxonburg-based firm is a design-build construction company with an emphasis on commercial and high-reliability construction, including data centers.

Etzel is a family-oriented company whose 20 employees have over 200 years of collective technical and field experience.

Etzel pioneered an approach they call the Advanced Master Builder Program, which expands on the idea of the original Master Builder which held a single entity responsible for both design and construction. With that as a foundation, Etzel built their approach to include comprehensive engineering services, industry-leading utilization of technology, open-book financial reporting, and professionally led general contracting. The Advanced Master Builder Program is why we believe clients can experience *The Future of Construction, Today*.

Today's building system technologies are becoming more and more complex, and modern projects require a team of experts functioning in a collaborative fashion to deliver a high-quality final product with a strong systems performance. Because of these extraordinary demands, clients see the benefit of Etzel's approach, and the company has had consistent growth of 15-20% each year, with 85% of their work coming from repeat clients.

TEN
YEARS

THE FUTURE OF CONSTRUCTION, TODAY.
